Index of Subjects

- Addiction** and, QEEG studies of cue-induced cocaine craving, 110-123
 —See also Cocaine, Marijuana, Methamphetamine
- Age factor** and, clinical relevance of EEG interpretation, 93-98
 —focal seizures, EEG prognostic considerations, 174-181
 —infant EEG spectral coherence data during quiet sleep, 54-69
 —P300 ERP predictor of memory impairment, 124-139
 —stimulus modality and response mode effects on P300 in young and elderly adults, 182-190
- Aggressive behavior** and, EEG does not predict response to valproate treatment, 84-86
 —ERP, 171
- Alcoholism** and, clinical relevance of EEG interpretation, 93-98
- Alexithymia** and, panic disorder, 214
- Alpha activity** and, antipsychotics treatment, 214
 —effects of topiramate, 87-92
 —marijuana users, 75-83
 —neurofeedback treatment of learning disabled children, 145-152
 —OCD patients treated with paroxetine, 70-74
 —photic stimulation in never-medicated patients with schizophrenia, 201-206
- Alzheimer's disease** and, P300 ERP predictor of memory impairment, 124-139
 —See also Memory
- Anosmia** and, olfactory ERP, 191-196
- Antiepileptic drugs** and, time distribution of seizures during long term video-EEG monitoring, 207-212
 —topiramate effects, QEEG, 87-91
- Antipsychotics** and, prediction of response to treatment, 214
 —See also Lithium, Paroxetine, Valproate
- Anxiety** and, QEEG in cue-induced cocaine craving, 110-123
 —panic disorder, 214
- Apnea** and, seizures in infants, role of continuous EEG monitoring, 197-200
- Arousal** and, frontal lobe, 5-12
 —ictal pattern, frontal arousal rhythm, 13-14
 —See also Sleep
- Assessment of Premature Infants' Behavior** and, EEG spectral coherence data during quiet sleep, 54-69
- Autonomic nervous system** and, challenge, industrial solvents, 159-160
- Behavior** and, ERP in learning impaired children during a hybrid go/no-go choice reaction visual-motor task, 99-109
 —neurofeedback treatment in learning disabled children, 145-152
- newborns, EEG spectral coherence data during quiet sleep, 54-69
 —See also Personality disorder, Psychiatric disorder
- Benign neonatal sleep myoclonus** and, follow-up of 4 members of an affected family, 15-17
- Benign rolandic epilepsy** and, interictal spike propagation across the central sulcus, 153-157
- Beta activity** and, cue-induced cocaine craving, 110-123
 —frontal lobe, 5-12
 —neurofeedback treatment of learning disabled children, 145-152
- Brain topography** and, olfactory ERP in normal subjects and patients with smell disorders, 191-196
 —See also QEEG
- Canadian Neurological Scale** and, acute stroke, comparison of prognostic value with QEEG findings, 1-4
- Central localization** and, spikes in benign rolandic epilepsy, 153-157
- Central sulcus** and, spike propagation in benign rolandic epilepsy, 153-157
- Cerebrovascular disorders** and, Canadian Neurological Scale with QEEG, 1-4
 —clinical relevance of EEG interpretation, 93-98
 —QEEG and SPECT in infarction, 165
 —QEEG and SPECT in psychiatric patients with methylphenidate, 163-164
 —value of early EEG after first unprovoked seizure, 140-144
- Children** and, benign neonatal sleep myoclonus, 15-17
 —benign rolandic epilepsy, 153-157
 —EEG spectral coherence data during quiet sleep, 54-69
 —ERP hybrid go/no-go visual-motor task, 99-109
 —frontal arousal rhythm, an ictal pattern, 13-14
 —neurofeedback treatment, 145-152
 —seizures, apneic with continuous EEG monitoring, 197-200
- Clozapine** and, prediction of response to treatment, 214
- Cocaine** and, cortical excitability, 160
 —impulsivity related to AERP, 171
 —QEEG studies of cue-induced craving, 110-123
- Cognitive performance** and, neurophysiological analysis in aging, 172
 —P300 predictor of memory impairment, 124-139
 —QEEG in methamphetamine dependent volunteers, 213
 —See also Memory
- Coma** and, transcranial magnetic stimulation, 213-214
- Connectivity** and, event-related correlations in learning impaired children during a hybrid go/no-go choice reaction visual-motor task, 99-109
- Contingent negative variation** and, electrophysiology of the frontal lobe, 5-12

- Coritsol** and, QEEG studies of cue-induced cocaine craving, 110-123
- Daubert** and, legal standards for QEEG admissibility, 39-53
- Depression** and, spikes after ECT, 23-27
 - See also Psychiatric disorder
- Dipolar field** and, benign rolandic epilepsy, 153-157
- Discriminant analysis** and, infant EEG spectral coherence data during quiet sleep, 54-69
- Dissociative states** and, EEG in psychiatric patients, 164
- Electroconvulsive therapy** and, spikes in psychotic patients, 23-27, 158
- EEG interpretation** and, clinical relevance, 93-98
 - complexity, approach in estimation, 162
 - predictive value after first unprovoked seizures, 140-144
 - prognostic considerations, focal seizures, 174-181
- Electrophysiology** and, the frontal lobe, 5-12
- Encephalopathies** and, clinical interpretation of EEGs, 93-98
- Epilepsy** and, benign neonatal sleep myoclonus, follow-up of an affected family, 15-17
 - benign rolandic, central sulcus spike propagation, 153-157
 - clinical relevance of EEG interpretation, 93-98
 - EEG after first unprovoked seizure in adults, 140-144
 - frontal arousal rhythm and ictal pattern, 13-14
 - nystagmus, possible relationship to PGO spikes, 32-38
 - prognostic considerations with EEG, 174-181
 - QEEG effects of topiramate, 87-92
 - time distribution, long term video-EEG monitoring, 207-212
 - See also Seizures
- Event-related potentials** and, electrophysiology of the frontal lobe, 5-12
 - learning impaired children during go/no-go visual-motor task, 99-109
 - impulsive aggressive behavior, 171
 - impulsivity in cocaine dependent subjects, 171
 - impulsivity in gambling task, 164
 - mismatched negativity in schizophrenia, 215
 - normal subjects and patients with smell disorders, 191-196
 - preattentive processing of abstract acoustic regularities in children, 162
 - predictor of memory impairment, 124-139
 - P300, psychiatric considerations, 166, 167, 171, 172
 - stimulus modality and response mode in adults, 182-190
 - time frequency analysis, 168, 169, 170
 - See also Evoked potentials
- Evoked potentials** and, liver transplant patients, 156
 - pre-stimulus EEG relationship, 161
 - repetitive auditory stimuli, 161-162
 - See also Event-related potentials
- Expert testimony** and, QEEG and the Frye and Daubert standard of admissibility, 39-53
- Fast Fourier Transform** and, time-frequency components, 168
- Focal seizures** and, EEG prognostic consideration, 174-181
 - relevance of EEG interpretation, 93-98
- Fourteen and six/second positive spikes** and, clinical relevance, 93-98, 167
- Frontal arousal rhythm (FAR)** and, an ictal pattern, 13-14
- Frontal intermittent rhythmic delta activity (FIRDA)** and, electrophysiology of the frontal lobe, 5-12
- Frontal lobe** and, asymmetry, computer interface, 163
 - clinical relevance of EEG interpretation, 93-98
 - cue-induced cocaine craving, 110-123
 - electrophysiology, 5-12
 - focal seizures, EEG prognostic considerations, 174-181
 - marijuana users, 75-83
- Frye and Daubert standards** and, QEEG admissibility, 39-53
- Functional brain mapping** and, recent advances, 173
 - See also QEEG
- Gamma activity** and, frontal lobe, 5-12
 - controversial wave forms, rare fast, 167
- Gastroesophageal reflux** and, apneic seizures, 197-200
- Gender** and, P300 predictor of memory impairment, 124-139
- Go/no-go paradigm** and, learning impaired children, 99-109
- Hyposmia** and, olfactory ERP, 191-196
- Impulsivity** and, electrophysiological substrates, 170, 171
 - ERP in a computerized gambling task, 164
 - error-related negativity, 161
 - See also Personality disorder
- Independent component analysis** and, separation of EEG components, 166
- Industrial solvents** and, human autonomic nervous system, 159-160
- Infants** and, apneic seizures, continuous EEG monitoring, 197-200
 - EEG spectral coherence data during quiet sleep, 54-69
 - See also Children
- Infection, CNS** and, clinical relevance of EEG interpretation, 93-98
- Insomnia** and, Sanfilippo syndrome, 18-22
- Kindling phenomena** and, spikes in psychotic patients following ECT, 23-27
- Learning disabled children** and, EEG and behavioral changes following neurofeedback treatment, 145-152
 - event-related correlations during a hybrid go/no-go choice reaction visual-motor task, 99-109
- Legal standards** and, QEEG, Frye and Daubert criteria, 39-53
- Lesions, cerebral**, and, clinical relevance of EEG Interpretation, 93-98
 - value of EEG in first unprovoked seizure, 140-144
 - See also Cerebrovascular disorders
- Lithium** and, intoxication mimicking status epilepticus, 28-31

- Marijuana** and, QEEG profile in acute and chronic heavy users, 75-83
- Medical-legal evidence** and, QEEG, American Academy of Neurology 1997 position, 39-53
- Memory** and, electrophysiology of the frontal lobe, 5-12
 - P300 ERP predictor of impairment, 124-139
 - See also Cognitive performance
- Methamphetamine** and, QEEG, neurocognition in dependent volunteers, 213
- Migraine** and, clinical relevance of EEG interpretation, 93-98
- Mini-mental Status Exam** and, P300 ERP predictor of memory impairment, 124-139
- Mismatch negativity** and, schizophrenia, 215
- MRI** and, apneic seizures, 197-200
- Myoclonus** and, benign neonatal sleep myoclonus follow-up of an affected family, 15-17
- National Institutes of Health** and, grant applications, 173
- Neurocognition** and, QEEG in methamphetamine dependent volunteers, 213
 - See also Cognitive performance, Memory
- Neurofeedback** and, EEG and behavioral changes in learning disabled children, 145-152
- Neuroimaging** and, EEG, 93-98
 - QEEG studies of cue-induced cocaine craving, 110-123
 - See also QEEG
- Nystagmus** and, epilepsy, possible relationship with PGO spikes, 32-38
- Obsessive-compulsive disorder** and, QEEG in patients treated with paroxetine, 70-74
- Occipital lobe** and, beta activity in cue-induced cocaine craving, 110-123
 - epileptic nystagmus, possible relationship with PGO spikes, 32-38
- Oscillatory activity** and, various frequency ranges, 168-169
- Olfactory ERP** and, normal subjects and patients with smell disorders, 191-196
- Panic disorder** and, emotional processing, 214
- Paroxetine** and, obsessive-compulsive disorder treatment, with QEEG, 70-74
- Pediatric disorders**, See Children
- Personality disorder** and, valproate treatment of aggression, 84-86
 - See also Addiction, Anxiety, Panic disorder, Psychiatric disorder
- Photostimulation** and, sequential EEG analysis in never-medicated schizophrenics, 201-206
- Poisoning, CNS**, and, clinical relevance of EEG interpretation, 93-98
 - See also Addiction
- Polysomnography** and, Sanfilippo syndrome, 18-22
- Prechtl neurological examination** and, newborn infants, EEG spectral coherence data during quiet sleep, 54-69
- Prematurity** and, infant EEG spectral coherence data during quiet sleep, 54-69
 - See also Children, Infants
- Primary generalized epilepsy** and, clinical relevance of EEG interpretation, 93-98
- Principal components analysis** and, infant EEG spectral coherence data during quiet sleep, 54-69
- Propagation pattern** and, benign rolandic epilepsy, 153-157
- Psychiatric disorder** and, antipsychotics treatment, 214
 - disruption of executive attention, 167
 - dissociative states, 164
 - EEG complexity, 162
 - EEG highlights, 158
 - mismatch negativity, 215
 - never-medicated schizophrenics, with photic stimulation, 201-206
 - QEEG, 163-166
 - QEEG in OCD patients treated with paroxetine, 70-74
 - spikes immediately after ECT, 23-27
 - status epilepticus, lithium intoxication, 28-31
- Psychomotor variant** and, clinical relevance, 93-98, 167
- P300** and, brain machine interface, 166
 - cocaine dependent subjects, 171
 - impulsivity in a gambling task, 164
 - medical, psychiatric and developmental problems, 171-172
 - mild cognitive impairment in aging, 172
 - normative comparisons, 172
 - predictor of memory impairment, 124-139
 - schizophrenia, 167
 - stimulus modality and response mode in adults, 182-190
 - See also Event-related potentials
- Quantitative EEG (QEEG)** and, cue-induced cocaine craving, 110-123
 - event-related correlations in learning impaired children, visual-motor task, 99-109
 - EP and liver transplant, 158
 - Frye and Daubert standards of legal admissibility, 39-53
 - infant spectral coherence, quiet sleep, 54-69
 - late onset schizophrenia, 165-166
 - marijuana heavy users, acute exposure, 75-83
 - neurocognition and methamphetamine, 213
 - neurofeedback in learning disabled children, 145-152
 - OCD patients with paroxetine, 70-74
 - photic stimulation in schizophrenia, 201-206
 - P300 predictor of memory impairment, 124-139
 - SPECT in cerebral infarction, 165
 - SPECT in clinical populations, 165
 - SPECT in psychiatric patients with methylphenidate, 163-164
 - SPECT in tryptophan depletion, 160
 - stroke, predictive value comparison with Canadian Neurological Scale, 1-4
 - topiramate effects, 87-92

- Rapid eye movements (REM)** and, epileptic nystagmus, possible relationship with PGO spikes, 32-38
 - Sanfilippo Syndrome, 18-22
- Risperidone** and, antipsychotic treatment, 214
- Rolandic spikes** and, benign rolandic epilepsy, 153-157
- Sanfilippo syndrome** and, sleep disorders, polygraphic study, 18-22
- Schizophrenia** and, antipsychotic treatment, 214
 - disruption of executive attention, 167
 - EEG complexity, 162
 - intermittent photic stimulation in never-medicated patients, 201-206
 - mismatch negativity, 215
 - QEEG, 165-166
 - spikes immediately after ECT, 23-27
- Seizures** and, first, unprovoked, value of early EEG, 140-144
 - frontal arousal rhythm, ictal pattern, 13-14
 - infants with apnea, continuous EEG monitoring, 197-200
 - lithium intoxication mimicking status epilepticus, 28-31
 - monitoring, video-EEG, 207-212
 - prognostic considerations with EEG, 174-181
 - relevance of EEG interpretation, 93-98
 - See also Epilepsy
- Serotonin reuptake inhibitors** and, QEEG in OCD patients treated with paroxetine, 70-74
- Sharp waves** and, apneic seizures, 197-200
 - frontal arousal rhythm is an ictal pattern, 13-14
 - frontal lobe, 5-12
 - valproate treatment of aggressive behavior, 84-86
 - See also Spikes
- Six/second spike** and wave, clinical relevance, 93-98
- Sleep** and, benign neonatal sleep myoclonus, follow-up of an affected family, 15-17
 - electrophysiology of the frontal lobe, 5-12
 - epileptic nystagmus, 32-38
 - frontal arousal rhythm, ictal pattern, 13-14
 - infant spectral coherence data, 54-69
 - Sanfilippo syndrome, polygraphic study, 18-22
- Slow activity** and, apneic seizures, 197-200
 - cue-induced cocaine craving, 110-123
 - focal seizures, prognostic considerations, 174-181
 - frontal lobe, 5-12
 - neurocognition in methamphetamine dependent volunteers, 213
 - neurofeedback in learning disabled children, 145-152
 - topiramate effects in epileptics and healthy adults, 87-92
 - valproate treatment of aggression, 84-86
 - value of EEG after first unprovoked seizure, 140-144
- Small sharp spikes** and, clinical relevance, 93-98, 167
- Smell disorders** and, olfactory ERP in normal subjects and patients, 191-196
- Specific probability maps** and, learning impaired children during a hybrid go/no-go choice reaction visual-motor task, 99-109
- Spectral coherence** and, infant EEG during quiet sleep, 54-69
- Spike and wave discharges** and, apneic seizures, 197-200
- Spikes** and, apneic seizures, 197-200
 - central sulcus propagation in benign rolandic epilepsy, 153-157
 - clinical relevance of EEG interpretation, 93-98
 - controversial patterns, 167
 - ECT in psychotic patients 23-27
 - focal seizures, EEG prognostic considerations, 174-181
 - ponto-geniculo-occipital and epileptic nystagmus, 32-38
 - value of early EEG in first unprovoked seizure, 140-144
- Status epilepticus** and, lithium intoxication, mimicking status epilepticus, 28-31
 - nonconvulsive, clinical relevance of EEG interpretation, 93-98
- Stroke**, See Cerebrovascular disorders
- Stress** and, controversial paroxysmal EEG waveforms, 167
- Temporal lobe** and, clinical relevance of EEG interpretation, 93-98
 - focal seizures, prognostic considerations, 174-181
 - panic disorder, 214
 - spikes in benign rolandic epilepsy, 153-157
 - spikes immediately after ECT, 23-27
- Theta rhythm**, See Slow activity
- Time distribution** and, seizures during long term video-EEG monitoring, 207-212
- Time-frequency analysis** and, ERP, 168, 169, 170
- Topiramate**, and QEEG effects in epileptics and healthy adults, 87-92
- Transcranial magnetic stimulation** and, long term potentiation in rat hippocampus, 163
 - patients in coma and vegetative state, 213-214
- Trauma, cerebral**, and, clinical relevance of EEG interpretation, 93-98
- Tumors, cerebral**, and, clinical relevance of EEG interpretation, 93-98
 - EEG value after first unprovoked seizure, 140-144
- Ultra fast activity** and, the frontal lobe, 5-12
- Valproate treatment** and, aggression, in borderline antisocial personality disorders, 84-86
- Video-EEG** and, long term monitoring of seizures, 207-212
- Vigilance** and, photic stimulation in never-medicated patients with schizophrenia, 201-206
